Seamless™ Wall Solutions
beMatrix Seamless, modularity and minimalism in one

The beMatrix® Seamless concept brings a fundamental change to the way we “see” the frame system. Seamless enables you to meet the wishes of even the most demanding customer with a structure that is durable, quick and easy to assemble.... and virtually seamless. The result is a great looking design without any visible or distracting seams in the walls. With the Seamless system, graphics and text with interrupting seams can finally be a thing of the past. Seamless is another example of our innovation efforts in the existing and highly popular beMatrix® Frame System.

SEG fabric or PanelSkins™, the soft and hard of “seamless”!

Our first Seamless option works with a silicon edge fabric stretched across multiple panels. The SEG fabric finish is ideal for running continuous images seamlessly over several frames without any physical or visual interruption.

Another Seamless solution is our new PanelSkins, wooden panels that fit together with a tongue-and-groove system. This enables the panels to be click-fastened extremely tightly against one another. This process is already used in the flooring industry, but beMatrix is the first to use this system as a standard solution in the modular world.

By avoiding visible seams, you can achieve a far better-looking result than was previously possible with the beMatrix System. Customers and show visitors are unanimously enthusiastic about the sleek appearance this new technique creates.
“A clean, uniform, seamless finish. That’s what my customers want from me”
Seamless™ can be applied to the beMatrix® concept and your existing frames

The great thing about Seamless is that you don’t have to invest in additional hardware to produce a totally seamless structure. The seamless fabric and PanelSkin application can be built using your existing aluminium beMatrix frames. Clever, isn’t it? Not to mention versatile and cost effective!

▲ When using Seamless, you simply build the beMatrix system using normal construction methods. No need for extra connectors.

▲ It’s good news for anyone who already has beMatrix frames. The PanelSkin seamless finish is totally compatible with DMK, b55 and b62 frames.
Seamless™ can be applied to the beMatrix® concept and your existing frames.

“One frame, multiple applications. That’s what makes our system so amazing!”
beMatrix Seamless fabric: where flexibility and weight matter

The Seamless™ system with SEG fabric walls has a sturdy, uniform look, but is surprisingly light and can be used in all sorts of ways.

T-REX, a handy and essential tool

T-REX is totally adjustable depending on the required depth of the slit.
beMatrix has developed the T-REX, a special finishing tool for the Seamless fabric concept. T-REX is a strong set of clippers for easily snipping the silicon strips for uninterrupted graphics crossing multiple frames.

Fabric is attached to the frames using silicone strips.
PanelSkin™, get to work quickly, time and again, with the same panels

PanelSkin™, in tough MDF™, features the tried-and-tested L2C® click system used worldwide. As already demonstrated with floors, this system can take a real beating – including when used as wall coverings. If used carefully and correctly, the panels can be installed multiple times without the click system losing its sturdiness.

▲ The start and end panels feature a smooth edge along one side that creates a neat and clean finish.

▲ PanelSkin panels are perfect for sawing to the required size, giving you a simple way of creating a shape that is different from the standard beMatrix grid.
“Seamless, even and smooth, durable and reusable... that’s PanelSkin from beMatrix”

Click and ... ready!

Place ordinary tongue-and-groove panels against one another at a slight angle, click together and press the PanelSkins against the aluminium structure.
beMatrix Panelskin can be painted, putting a perfect result within easy reach

Seamless uses specially developed wooden PanelSkin panels that fit all beMatrix frames. They create a sturdy, flat wall and are available as standard in 10 mm thick MDF with a width of 496 mm and a height of 2418 mm. PanelSkins can be attached quickly and securely to the aluminium structure using velcro.

Choice of finishes
The wooden panels come in 2 versions including a ready-to-use white laminate finish or a substrate ready-to-paint. The coat of paint totally removes any remaining seams from sight.

Perfect result
To achieve the best seamless results, your best option is the ready-to-paint panels. Painting fills in the very fine seams between the panels and the seams become virtually invisible.
No more seams

The tight-fitting tongue-and-groove system means seams are reduced to a minimum. You can choose to remove them totally with a coat of paint.
